SMART LIGHT

SMART LIGHT

What is a automatic/smart light?

SMART LIGHT

An **automatic light** is a type of light that can turn **on** or **off** without direct human control, thanks to **sensors** or smart **controllers**

SMART LIGHT

How are smart lights useful?

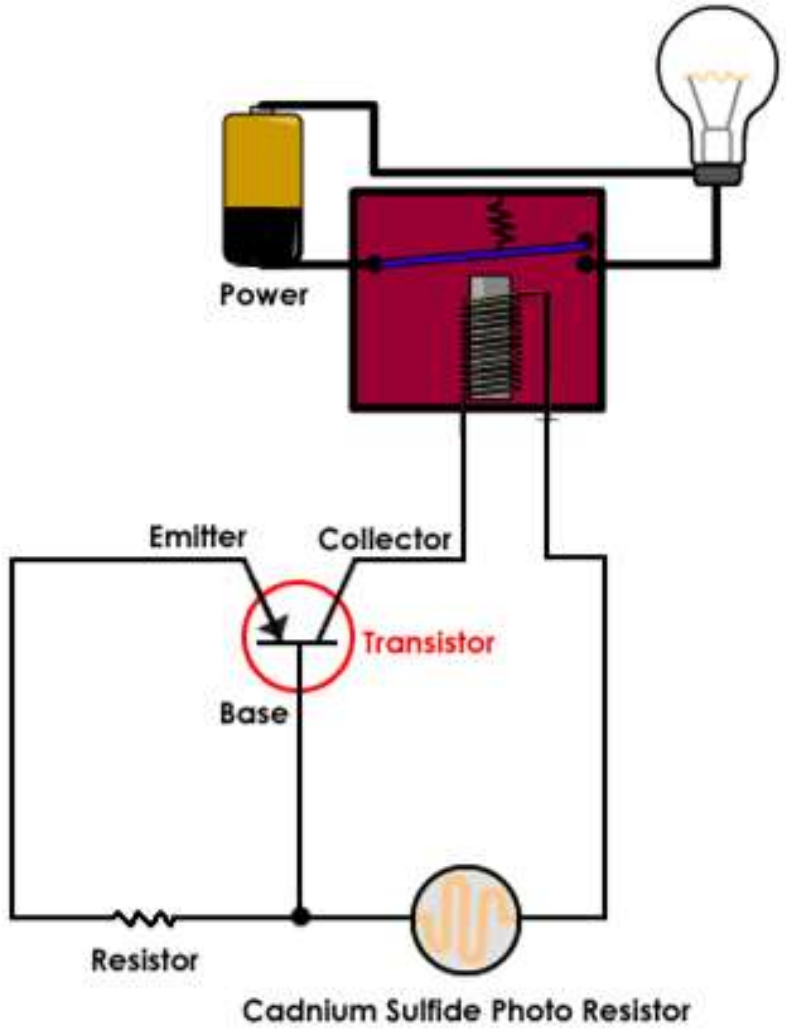

SMART LIGHT

- Save electricity
- Convenient, no need for manual switching
- Increase safety (turn on the light when someone enters).

SMART LIGHT

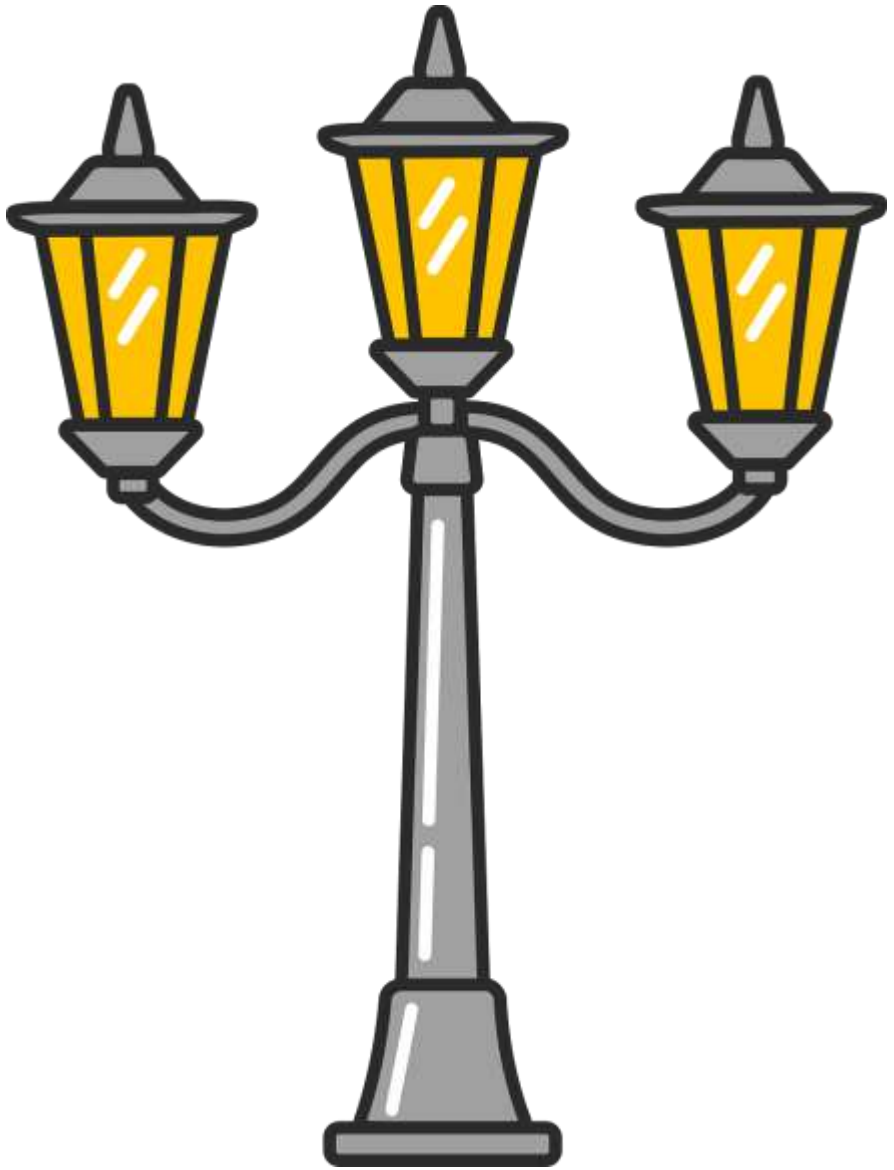

Power
Emitter
Collector
Transistor
Base
Resistor
Cadnium Sulfide Photo Resistor

SMART LIGHT

Where can you see the smart light?

SMART LIGHT

Street Light

SMART LIGHT

Smart house

LIGHT SENSOR

Why do smart light know when it’s dark/bright?

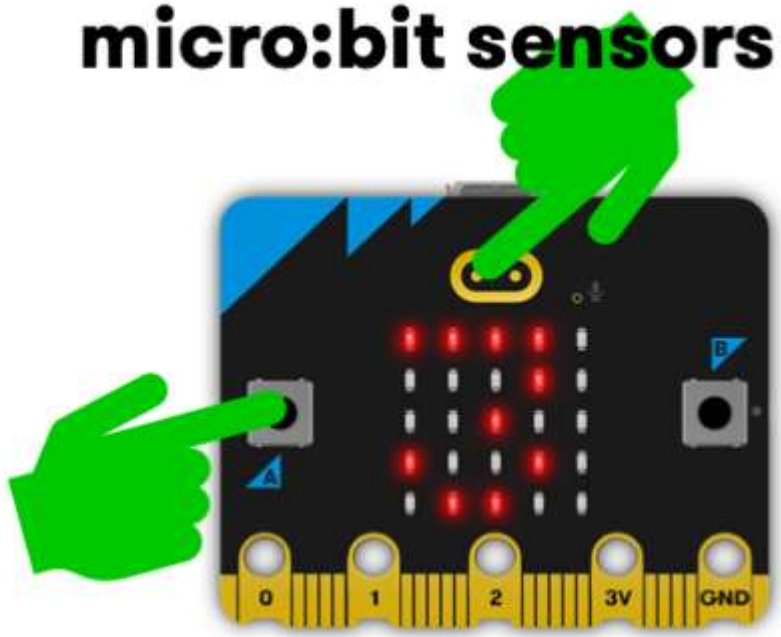

LIGHT SENSOR

A light sensor is a device that can **detect** and **measure** the intensity of **light** in the surrounding environment.

LIGHT SENSOR

Light sensor in micro:bit

LIGHT SENSOR

Guess how a light sensor works.

LIGHT SENSOR

- When the light is **strong** → the sensor receives a **high** value.
- When the light is **weak** or **dark** → the sensor receives a **low** value.
